

ENERGY EFFICIENCY POLICY

Astro srl acknowledges that efficient energy management is a strategic element for corporate competitiveness and environmental sustainability.

The Management is committed to promoting the rational use of energy and to continuously improving its energy performance across all processes, facilities, and offices.

Efficiency Objectives

To reduce environmental impact and consumption, Astro srl sets the following objectives:

- Increase the use of renewable energy sources (e.g., purchase of green energy)
- Optimize the use of heating systems, lighting, and production facilities by eliminating waste
- Evaluate the replacement of equipment and machinery to improve energy efficiency

Actions and Tools

Continuous monitoring of energy consumption

Planning of periodic maintenance to ensure maximum efficiency of machinery

Training and Communication

Raise awareness and train all personnel to operate responsibly

Share this policy with suppliers and partners, encouraging them to adopt sustainable practices

Review and Improvement

Management is committed to periodically reviewing (at least annually) this policy to ensure its ongoing suitability and to define new strategic objectives.
